

Cleaning agents for the paint and coatings industry.

The paint and coatings industry places the highest demands on cleaning agents. Our state of the art cleaners can be used on production and transport containers/vessels and their components.

We replace problematic solvents (flammable, toxic, emissions) with non-hazardous products based upon novel combinations of raw materials.

We are positioned to respond with great flexibility and agility to the needs and desires of our customers. Using our in-house formulas and fast production methods we can guarantee short delivery times and a high level of technical expertise. Products can be individually customised where needed.

Short response and delivery times are highly valued by our customers.

DE-Paint XR-Series

- can be prepared for distillation
- extremely high solvent power
- can also be used also in low temperature
- massively reduced emissions
- very user-friendly
- optimal environmental sustainability
- can be used with or without final rinsing water

DE-Paint XN-Series

- can be used also in low temperature
- massively reduced emissions
- extremely high solvent power
- low odour
- highly economic
- only to be used in combination with final rinsing water
