OUR NEW CLEANING AGENTS ARE REVOLUTIONISING THE PAINT AND COATINGS INDUSTRY

WE ARE STIRRING THINGS UP

There are good reasons for the great success we have seen since 1994 with special cleaning agents and solvents.

Constant further development of proven cleaning agents, development of products according to the individual needs of our customers and excellent value for

money are amongst the key factors of our success.

Our special cleaners are used in spraying, brushing and dipping processes. Fresh, dry and even hardened on paint and lacquer residues are carefully and thoroughly removed.

Our professional expertise as well as on-site advice and support will not disappoint you. We do of course stay true to our roots in making it our daily work to find the optimal balance of economy and ecology.

That is something that you can rely on!

PRODUCTS AND SERVICES FOR THE PAINT AND COATINGS INDUSTRY

Efficient, good value and safe

We have adapted and developed our high-quality cleaners in response to the specific needs of the market in the paint and coatings industry.

Our high-performance and good value products ensure perfectly clean surfaces and, where necessary, we adapt the cleaner to the specific needs of the customer.

With our own customer service laboratory and efficient production processes we can guarantee quick response and delivery times – a competitive advantage that is very highly valued. Our cleaning products for the paint and coatings industry distinguish themselves with their very high efficiency and optimal cost-benefit ratio. Using new combinations of

active ingredients we are seeing exceptional cleaning results.

Many products are highly versatile and, depending on the type, can also be distilled and therefore recovered. Our excellent expertise means we can offer the best cleaners for production vessels and transport containers as well as their associated accessories and components.

Customers particularly benefit from our experience to replace problematic solvents (flammability, toxicity, emissions). A very close customer-supplier relationship means we are familiar with individual problems and can develop solutions quickly and pragmatically.

FÄRBER & SCHMID: ON THE ROAD TO SUCCESS SINCE 1994

Innovation an expertise

Horst Färber and Felix Schmid founded Färber & Schmid AG in Affoltern am Albis in 1994.

The positive development of the business meant that by 1996 a relocation to Oetwil an der Limmat was necessary and then a further relocation in 2001 to the present location in Dietikon bei Zürich.

As an owner-managed SME we focus our operations in the special chemicals sector. The subsidiary Färber & Schmid GmbH was founded in Stuttgart in 2012. Since then we have been able to serve the German market more effectively and with better customer service. We are currently expanding our international operations.

Färber & Schmid is today in a position to bring together flexibility and performance. We place great importance on various fields of activity in our customer laboratory. New special chemicals with various uses are constantly being developed and improved.

We make no compromises with regards to safety. Processes, safe working and environmental protection are ensured and constantly monitored using a proven quality management system of the highest level.

Our entire knowledge based in the fields of engineering and consulting comes as part of the service to our customers.

MY POINT OF VIEW

by Felix Schmid

The paint and coatings industry places great demands on cleaners and requires products with new properties that are highly effective and ecologically safe.

And it is exactly that which makes up our core expertise. As competent chemists we have a huge prove of experience to call upon in our laboratory and production processes.

We are convinced that we can quickly develop our customer base in the paint and coatings industry.

Key factors in this are our strong customer orientation, distinctive flexibility, high level of service and especially our focus on practice-oriented solutions and applications.

You will be impressed!

*We always
keep
our word.*
